

Effect of County Population Size on Median Income & Unemployment

Ben Geissel
Rob Hermany

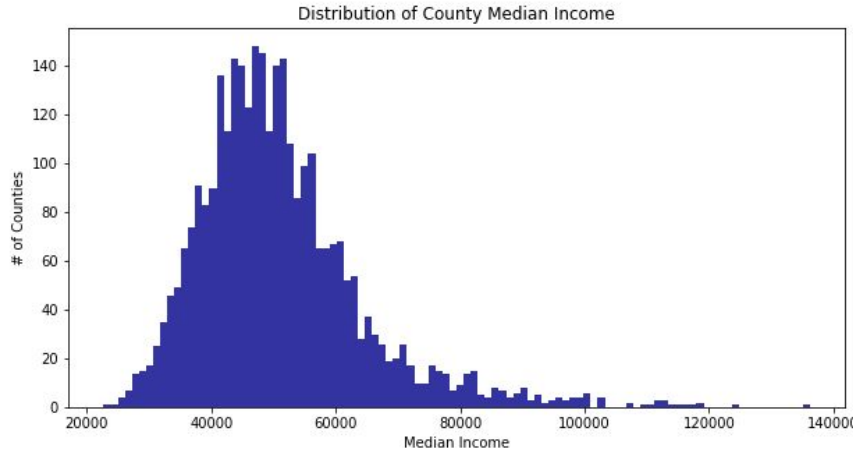

What is the effect of county populations?

- Will the population size of a county affect the following metrics?
 - Median Household Income
 - Unemployment Rate
- Use two-tailed z-tests to determine if county population size creates a statistically significant change in mean, as compared to the US mean.
- Evaluate tests by comparing the p-values with our alpha (0.05).

Data Sources

- US Census Bureau API:
 - API: <http://api.census.gov/data/2018/pep/population>
 - County Populations
- USDA County Level Dataset:
 - <https://www.ers.usda.gov/data-products/county-level-data-sets/download-data/>
 - County unemployment rate
 - County Median Income

Population Dataset - All US Counties

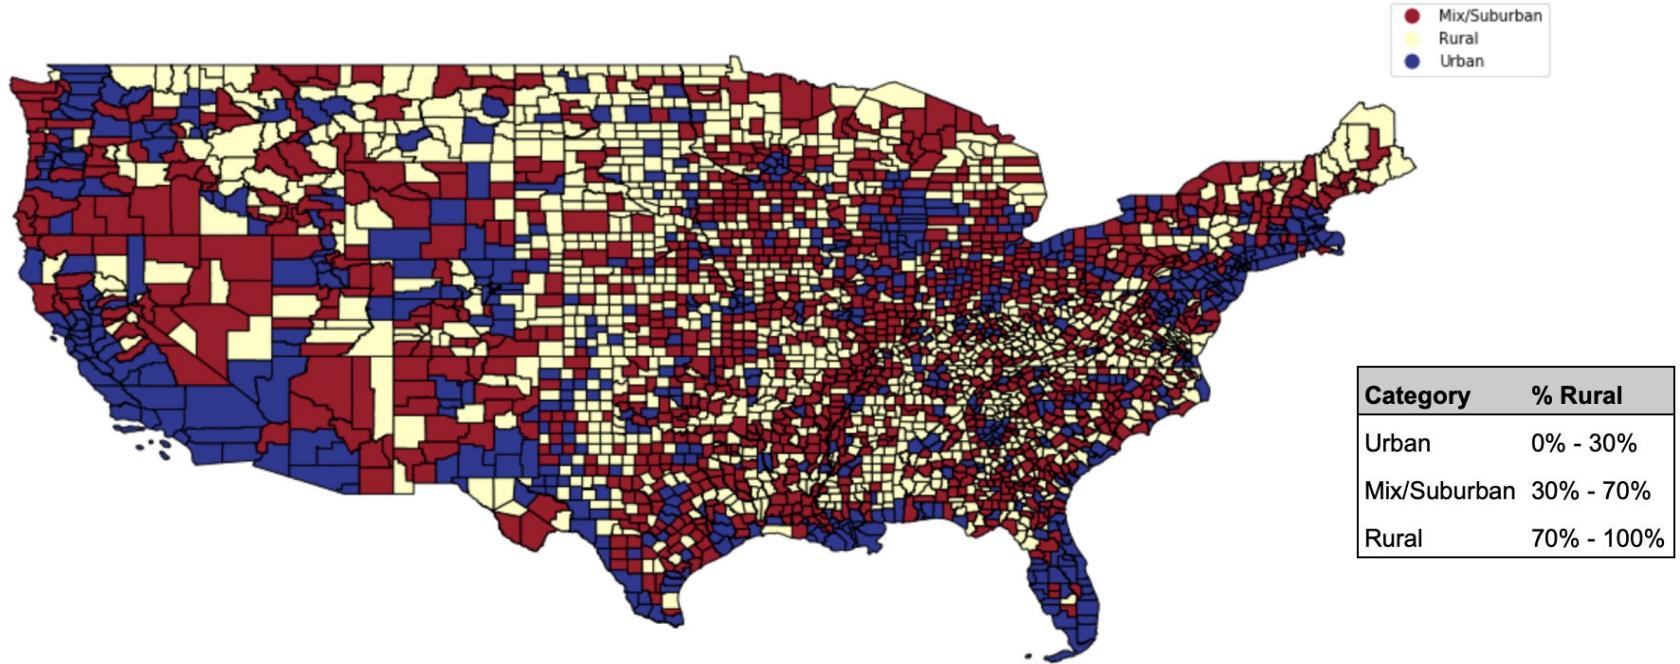

- # of counties: 3,141
- Median Income Summary Stats:
 - μ : \$51,090.53
 - σ : \$13,497.97

- # of counties: 3,141
- Unemployment Summary Stats:
 - μ : 4.60%
 - σ : 1.67%

County Population Categories

Urban

H_0 : County median income is not affected by urban populations

H_1 : County median income is affected by urban populations

μ : \$51,090
 σ : \$13,497
 \bar{x} : \$60,977

Fail to Reject H_0

H_0 : County unemployment rate is not affected by urban populations
(pop_mean == urban_mean)

H_1 : County unemployment rate is affected by urban populations
(pop_mean \neq urban_mean)

μ : 4.59%
 σ : 1.66%
 \bar{x} : 4.35%

Fail to Reject H_0

Mixed / Suburban

H_0 : County median income is not affected by mixed / suburban populations

H_1 : County median income is affected by mixed / suburban populations

μ : \$50,090

σ : \$13,497

\bar{x} : \$50,167

Fail to Reject H_0

H_0 : County unemployment rate is not affected by mixed / suburban populations (pop_mean == mixed /suburban_mean)

H_1 : County unemployment rate is affected by mixed suburban populations (pop_mean \neq mixed /suburban_mean)

μ : 4.59%

σ : 1.66%

\bar{x} : 4.60%

Fail to Reject H_0

Rural

H_0 : County median income is not affected by rural populations

H_1 : County median income is affected by rural populations

μ : \$51,090
 σ : \$13,497
 \bar{x} : \$46,423

Fail to Reject H_0

H_0 : County unemployment rate is not affected by rural populations
(pop_mean == rural_mean)

H_1 : County unemployment rate is affected by rural populations
(pop_mean \neq rural_mean)

μ : 4.59%
 σ : 1.66%
 \bar{x} : 4.72%

Fail to Reject H_0

Conclusion

- The population size of a county does not create a significantly different change in median income or unemployment metrics
- Urban counties have a higher median income by \$9k, lower unemployment rate by .35% from our sample
- Rural counties have a lower median income by \$4k, higher unemployment rate by .20% from our sample
